PETROLEUM EXCAVATION ODOR CASE STUDY

Project Situation

A US naval station in California had petroleum hydrocarbon contaminated soil which required excavation. The concern was odor complaints from the nearby residents during the excavation. BioWorld was contacted by an engineering company regarding odor control. BioWorld Odor Neutralizer was purchased and applied to the sidewalls and exposed groundwater surfaces of two excavation pits.

Products/Technology Used

#41064 BioWorld Odor Neutralizer BON-CC-41 Concentrate

Results

After BioWorld odor treatment was initiated, there were no complaints from neighbors in the vicinity of the project.
