LAUNDRY ODOR CASE STUDY

Project Situation

An industrial laundry operation in California is located in a residential area. Odors emanating from the laundromat generated complaints from residents adjacent to the facility. BioWorld designed and installed an industrial misting system to inject BioWorld Odor Neutralizer into the exhaust ductwork to control odors leaving the building.

Products/Technology Used

#41064 BioWorld Odor Neutralizer BON-CC-41 Concentrate
#F5850 Industrial Fogger System

Results

The odors were completely eliminated. On-going treatment has controlled the laundromat odors emanating from the facility and residents have stopped filing complaints.
